

This 2008 ASIA precourse will celebrate the progress made with regards to training, classification and systemization in SCI. From the autonomic standards to the new internet based training program for the neurologic standards, we will discuss the latest in SCI measurement and training. We will also debate the International Standards Examination and whether it should be modified and Celia Whitten from the FDA will discuss cellular therapeutics and SCI. Finally, current and future plans for SCOPE will be discussed.

### **Standards and Outcomes for assessing SCI: Integrating into Clinical Trials**

12 pm: Welcome: Marcalee Sipski, MD and John Steeves, PhD

12:10 pm: Stephen Burns, MD and panel

The ASIA exam: Should it be modified to two versions? A brief clinical version and a more extensive research version?
